

The Best Commercial Surface Cleaner for Hard Surfaces

DENAA+ Probiotic Surface Cleaner spray is ready to use and specially designed for cleaning hard surfaces and windows in busy buildings. Ideal for offices, schools, theatres, shops and public buildings.

This eco-positive bio-detergent has added 'good' bacteria (probiotics), naturally sourced from plants. It is an effective, safer and more responsible alternative to traditional synthetic and chemical cleaners.

Also available in an economical and eco-friendly [1 litre and 5 litre concentrate](#).

- Deeply removes organic matter.
- Suitable for all water-resistant surfaces.
- Decomposes organic waste.
- US Green Seal certified.
- Does not leave streaks.
- Ready to use or concentrated formula.

These helpful probiotics clean safely and thoroughly at a microbial level using a natural mechanical action. They inhibit pathogenic bacteria that cause infections, degrade bacterial biofilm and restore healthy microbial balance – all whilst reducing [antimicrobial resistance](#).

This is the best commercial surface cleaner if you want to protect surfaces and lengthen re-contamination times. The probiotics in the spray continue to work for

up to three days after application, so results are longer lasting. In contrast, most chemical cleaners stop working once dry, so re-contamination starts after only one hour.

Regularly cleaning with **DENAA+ Probiotic Surface Cleaner** creates a safer, healthier and more protective [microbial environment](#).

Reduces Bio-Allergens and Odours

DENAA+ Probiotic Surface Cleaner also reduces bio-allergens, including mould spores, animal dander, dust mite faeces and pollen. This assists allergy management.

The helpful probiotics also actively eliminate the root causes of unpleasant odours, which removes the need for polluting air fresheners to mask smells.

All ingredients are non-polluting, non-irritating, hypo-allergenic and quickly biodegradable.

Instructions

Spray is ready to use. Shake bottle before use. Spray lightly onto the surface and wipe with a clean microfibre cloth. Spray directly into inaccessible areas – the natural capillary action of the water combined with the probiotic movement can reach areas that are manually inaccessible.

COMPOSITION

1. Water
2. Plant-Based Probiotic Bacteria (Auto-Active Microorganisms)
3. Surfactants
4. Mint Aroma
5. Emulsifier
6. pH Stabiliser

RECOMMENDATIONS

1. DO NOT USE with products that may change effectiveness
2. DO NOT swallow.
3. For use on waterproof surfaces only.
4. Avoid contact with eyes.
5. Store in a dry place 10°C-35°C.
6. Keep out of the reach of children.
